

**Daily Breakfast - The #1 Catholic Podcast with Father Roderick** [<http://sqpn.com/scripts/dailybreakfast.php>]

The perfect way to start your day, with a mix of music, news, movies, tv-series, videogames, history, health tips, inspiration, science fiction and more. Hosted by the Dutch catholic podcasting priest Fr. Roderick Vönhögen

**January 22nd, 2007 – Extract (Cloze exercise)**

Now the **1.** around the iPhone has diminished a little bit over the last week, fortunately, and the more I think of it the more I decide that I'll probably not buy it because it's way too expensive and this is just the first model and there are bound to be other models that will be a lot cheaper and they will have the same **2..** [According to - ] I think it was Steve Jobs or someone else from Apple said that if ... when the iPhone is **3.** in Europe it might even have what they call over here UMTS, which is this broadband kind of superfast **4.** and it might support that whereas in the United States for now, according to the **5.** of this first model, it will not support that. And ... but the price is going to be **6.,** probably. According to the German Amazon.com **7.,** which is Amzon.de, they have ... the price is up for just a day or so. The 8 GB version would cost 999 euros and the 4 GB version would be a **8.** 899 euros, which is huge ... it's totally impossible to sell a phone for that price, no matter how cool it is, but for that price you can almost buy two laptops, not Apple ones but ... just to give you an idea. That's so expensive. So I don't know if this first model is going to be a success but apparently ... it's very clear that Apple is just trying out the **9.** and trying to get some experience in this and they will probably use that experience to make a much better product later on. So that's one additional reason not to buy this first model. There was some more news about .... oh yes, they are searching also for one **10.** over here in Europe, so just like the singular deal in the United States. They want one European provider to sell the phones instead of having all these little companies offering their **11.** model for this phone and that will probably force them to end up with Vodaphone or perhaps Orange, I don't know. There are not that many European **12.** on the market over here. The situation is very, very different from the United States. There's a lot more **13.** or so between the different companies. We'll wait and see.

**Fill in:** 1. competition 2. data service 3. hype 4. launched 5. market 6. players 7. prohibitive 8. provider 9. specs 10. subscription 11. technology 123. wapping 13. website
