Documentary on 3Sat: Noah`s Ark in the eternal ice - the rescue of plant diversity (Germany 2008)
Plant diversity is acutely threatened with irreplaceable species being lost forever on a daily basis. Therefore, a gigantic seed store is being built on the Arctic island of Spitsbergen called Arctic Seed Vault. The enterprise indicates how important the preservation of plant diversity is and how much effort is made to preserve all existing crop seeds for eternity in a seed database.
The World Food Organization estimates that on a global basis the diversity of food crops has already been reduced by 75 percent. Farming is dominated by a limited number of highly productive crops, of which, however, only a few are sufficiently pest and drought resistant.
